Hello,

I have written the appendix E where we should show at least 1 best fit (I forgot that it does not depend on background so we would have at most 2).

This will show, I believe, that THERE IS NO OTHER REASON TO CUT $CurlyR_{ij}$ TO $E_{\nu} = 2 \text{ MeV}$ OTHER THAN CHOOSING TO PURSUE METHOD 1. No hidden motivation to evade, hide any problem in Method 1. So we can eliminate the two sentences Danny wanted to add in a paper about Method 2 which, in my opinion, besides being totally irrelevant for Method 2, and confusing (because they refer to a different analysis method, only now explained in Appendix E), were wrong.

Best,

Graciela
