

Yasuda Koichiro <k.yasuda5160@gmail.com>

I am back home- do you want to talk via zoom now or in a short time?

Hello, I wonder if Ko and Muping have done the plots I suggested earlier today. If you have them, could you please share them via email?

The results for the bias and variance should depend on the background. The plot sent by Ko was computed for which background?

We should do it also for the other background and compare.

Given the importance of these results, I think we should include them before our section Results, maybe in a separate section.

Best,

Graciela

I will check my email messages at 11pm LA time, in 1 hour from now, to see if you answered. If you want to meet via zoom we can meet then.

Muping and Ko, please read the messages I sent earlier saying which plots we need and (if AI is right) how to compare with optimized Tikhonov regularized, if you have not read yet.

Best,

Graciela

Hi Graciela,

I'm currently at a conference in Kyoto, so I'm not able to prepare and send the plots you requested right now.

Could you please give me a little more time? I am working on the plots, and will send you as soon as I can by this afternoon.

Best,

Ko

We have been relying on ChatGPT a bit too much for the bias calculations. Presumably, Conway's book should confirm them.

Certainly Ko. Thanks for your answer and for all the work you are doing. Have a very good conference!

Graciela

Danny: Never rely on AI !! (even less what I send since I use free Google Gemini). Everything needs to be checked. Bob indicated the calculation we did so far and we will check with him the results and what Ai said about the ratio =1 in optimized Tikhonov (maybe you knew it already?). He may also give us proper references. If you could discuss with him about the different bias definitions it would be great.

Can you check the Cowan book the definition of bias that Bob is using ? Does the Cowan book indicate what we are doing?I did not have time to check the book.

Best,
Graciela

Perhaps we should check before doing calculations?!

Hi Danny

The calculation Ko did already was indicated clearly by Bob (you have his message). We are not going to make any other (except maybe check the other background model) As soon as I have the results as a percentage to get back to him and check again.

What other calculations you refer to? What else do we need to check?

Best

Graciela
