Hello,

I had asked Ko to make some cosmetic changes in the new 180 intervals figures he sent last (in particular use the same vertical axis scale) but since this is taking so long, I just added figures as he sent them.

I made only by hand the most significant modification to one figure, adding one horizontal line at the 0.1 level in $b^2.MSE$.

The text I added is left in color. I explained the new figures and changed what we said about bias in the "results".

Please if you add/change some text, remove my color and leave your new text IN YOUR COLOR so we can see the new text very easily.

Danny, please call "vertical axis", and not "y" axis to a vertical axis.

Can you please look at the paper SOON?

If you think we need to meet please propose a meeting time SOON!

Best,
Graciela

I have gone through the new text. The figures need some work. Let's meet.

Danny, propose a meeting time please. I cannot meet on my Wednesday.

I proposed cosmetic changes in the figures last week and Ko has not yet answered. This is why I thought that putting the figures as he sent them is fine. I think he is busy with other things and would like to finish the paper.

Best,
Graciela

I am very sorry.
I am working on the figures now and will send you as soon as possible.

Best,
Ko

Hi Ko, it would be good if Danny clearly says which changes of those I proposed he thinks the figures need. He also did not answer my message from last week.

Graciela

Hi, Ko: the only change I see is that we need to make the bias symbol different than the background symbol. I proposed using boldface $\{\bf b\}_j$

Danny:

----your b_j without boldface is the same as our symbol for background. We need to keep the boldface I put, why do you take it out?

---FIG 12: The labels are already consisted with the text as they are, I think. Except that we should use a different symbol for b_j , I propose $\{\bf b\}_j$ Otherwise say explicitly what you mean

---Remove Fig 13 NO- Bob said that always before showing a ratio you need to show both terms in the ratio to see if e.g. the ration is small because the numerator is small or the denominator large.

Bob asked specifically for the three figures that are now in the paper and I think we should have all 3.

Best,

Graciela

If you want to satisfy Bob's dictates, discuss Fig .3. Currently, we say nothing about it.
